

Cigna Transplant Network

The Cigna LifeSOURCE Transplant Network® is comprised of programs Cigna considers to be Designated.

Designated programs in the Cigna LifeSOURCE Transplant Network® provide transplant services at an in-network Health Plan facility. The associated individual programs (solid organ or bone marrow/stem cell) must meet or exceed the Cigna LifeSOURCE Transplant Network Performance Guidelines for Quality and cost criteria inclusion.

Supplemental programs provide transplant services with an in-network Health Plan facility, but the program does not meet one or more requirements of the Cigna LifeSOURCE Performance Guidelines for Quality and/or cost criteria for inclusion to qualify as a Designated program. Supplemental programs are not defined as LifeSOURCE and may not be included in all benefit plans. Please work with the Cigna transplant case management team to determine the program transplant network level participation level.

Altogether, Cigna contracts with more than 180 transplant centers for 750+ transplant programs; over 75% of those programs are in our Designated Cigna LifeSOURCE Transplant Network®. We provide our clients and customers with the access they need for solid organ and bone marrow/stem cell transplantation while improving cost containment and reducing their financial risk.

For more information, go to <https://cignalifesource.com>. PLEASE NOTE: Hospital and Individual transplant program participation is subject to change without advance notice. Please check the list regularly to make sure you have the most up-to-date information
